WEEKLY MORBIDITY REPORT  
EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week}}{\text{Average Strength for the Week}} \times 52 \times 1000$$

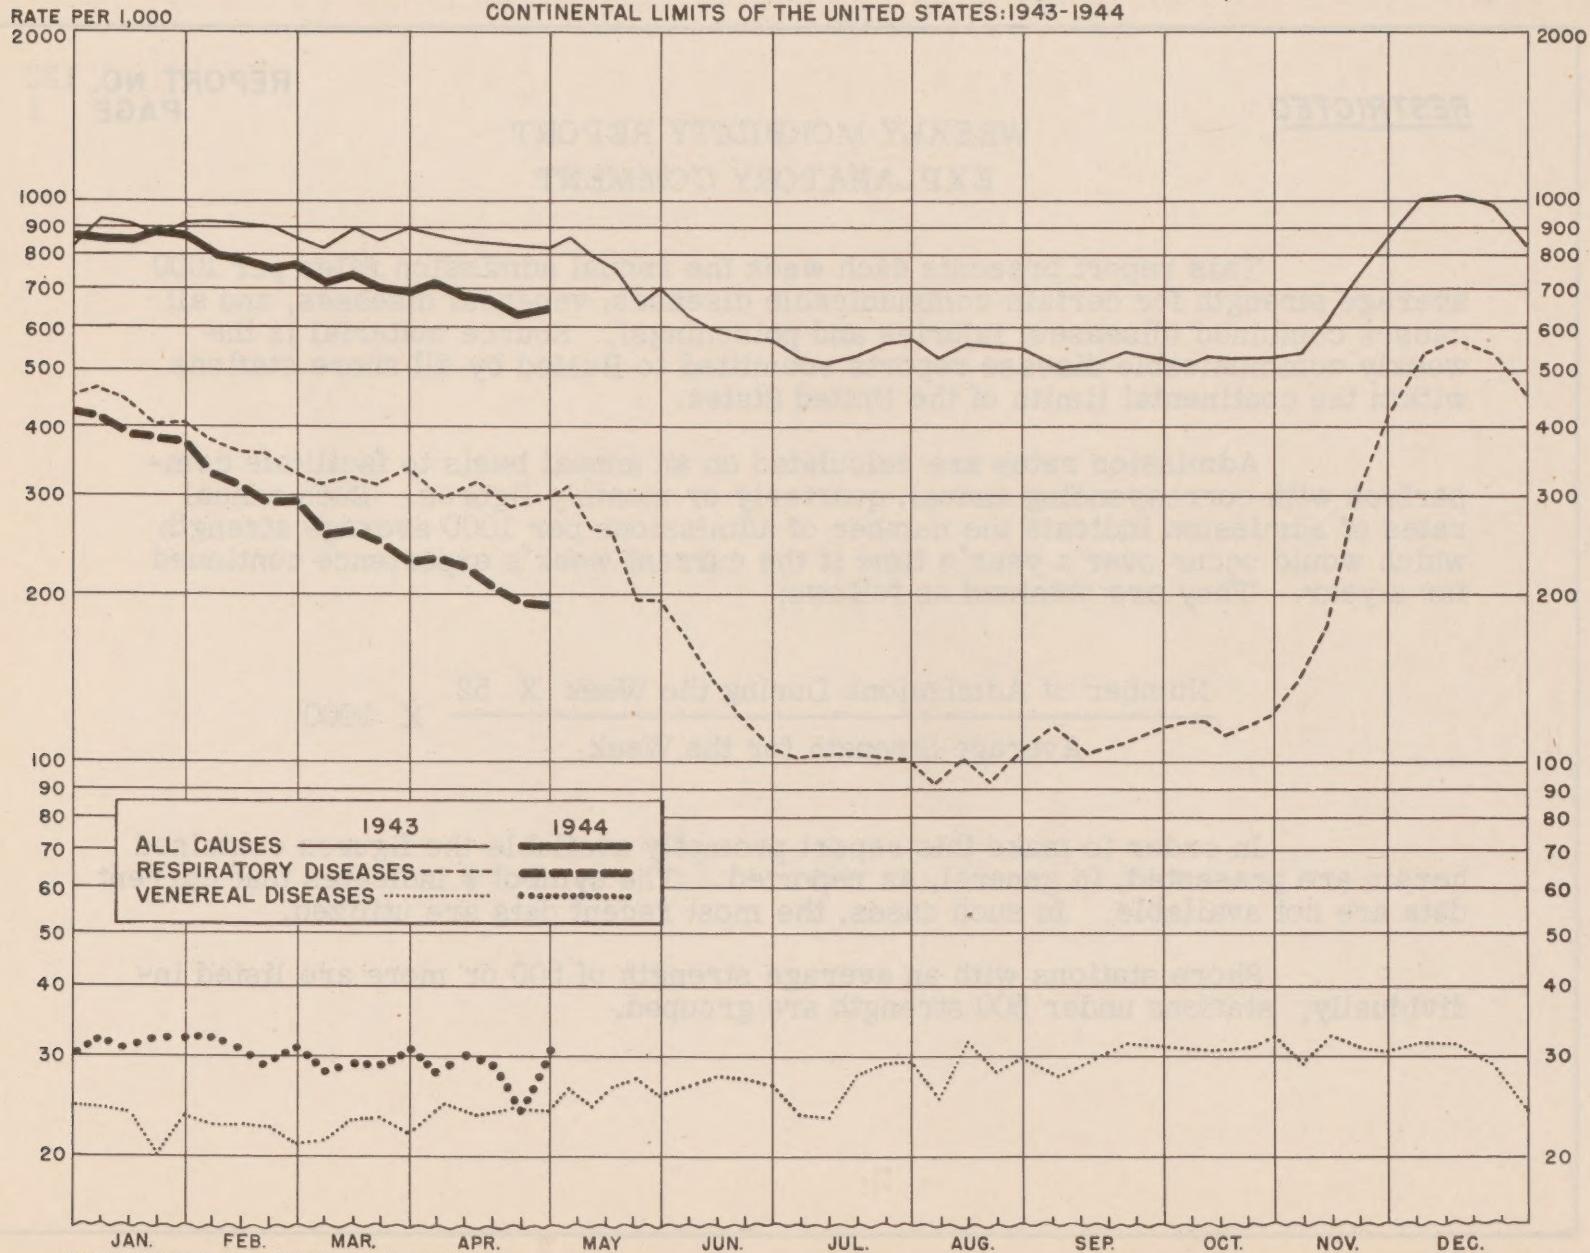

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

CURRENT TRENDS

Week Ending 29 Apr 1944

The admission rate for All Causes rose slightly this week but not sufficiently to interrupt seriously the seasonal downward trend. The curve stands below the 1943 curve for the corresponding week.

The respiratory disease curve continued its downward course and stands below 200 while for the comparable week of 1943 the curve stood at 300. The highest rate (280) was reported for the Potomac and Severn River Commands, the next highest (254) by the 9th District, the lowest (80) by the 7th District.

The curve for the venereal diseases, after dropping last week to the lowest point of the year, rose again this week to a point above 30. The highest rate (44) was reported for the 8th District, the next highest (42) by the 5th District, the lowest (19) by the 9th District.

Influenza and Catarrhal Fever. The downward trend for these infections continued, the curve remaining well below the 1942 and 1943 curves for the comparable period. The rate of 123 this week is the lowest point reached since the fourth week of October 1943. The highest rate (184) was reported for the 3rd District, the next highest (166) for the 9th District, the lowest rate (52) for the 7th District.

Pneumonia--Broncho and Lobar. The rate for these infections after standing for two weeks at 5 dropped this week to 4, a point about midway between the 1942 and the 1943 curves for the comparable period. The rate for the 13th District (13) was the highest rate reported for any District. No other District reported a rate over 5 and four Districts reported rates of 1 or less.

Pneumonia, Atypical. For the 8th consecutive week the rate for atypical pneumonia was reported at 3. The curve since Jan. 1, 1944 has stood consistently above the 1943 curve. The highest rate (10) was reported for the 11th District and the next highest (6) for the 13th Dis-

CURRENT TRENDS--CONTD.

trict. The 7th District reported no cases.

Rheumatic Fever, Acute. After standing at 2 for the past two weeks the acute rheumatic fever rate rose again this week to 3. The highest rate (16) was reported for the 13th District. No other District reported a rate over 4. The 6th and 7th Districts reported no cases.

Scarlet Fever. The rate for scarlet fever dropped to 8. This is the lowest rate reported since the first week of November 1943 and represents a great improvement over the peak rate of 21.5 reported for the week ending Jan. 1, 1944. The curve for scarlet fever turned upward only in the Potomac and Severn River Commands and in the 3rd, 6th, and 13th Districts. The highest rate (41) was reported for the 13th District, the next highest (12) for the 9th District. The 7th District reported no cases.

Cerebrospinal Fever, Meningococcic. The rate for this infection dropped to 0.19 which is the lowest rate recorded since the second week of December 1942. No District reported a rate greater than 0.77, and 7 Districts and the Potomac and Severn River Commands reported no cases.

Malaria. The malaria rate dropped to 2 this week. The 1944 curve has, however, continuously stood at a higher point than either the 1942 or the 1943 curve. The 1st District reported the highest rate (6), the 11th District the next highest (5). The Potomac and Severn River Commands reported no cases.

Measles. The measles rate rose slightly bringing the curve above both the 1942 and 1943 curves for the first time since the week ending Feb. 6, 1944. The highest rate (20) was reported from the 13th District, the next highest (16) from the 3rd District, the lowest (3) from the 12th District.
